

Resume and DGraph Results

In this pic, given a Transaction search by reverse predicates all the ips related and by reverse again get all the buyers related of the IP for that transaction.

And in this one is almost the same query above, but here the “starter” param is a Buyer Type, this is, search a Buyer by ID and get all the other Buyers that use the same IPS of all his Transactions.

Regardless final decision, I congratulate you on creating an amazing test. A very rare test for me but in which I learned a lot. I already knew vue, but the others had never seen them. Thanks!
